Hello,

My name is Vasoya Parth, and I'm currently in the 4th year of B.Tech in Computer Science and Engineering at Darshan University, Rajkot.

I'm from Kalavad, and I completed my 12th Science stream in Junagadh.

Since the beginning, I've been passionate about technology and always curious to know how things work behind the scenes.

In my family, my father runs an electric store, my grandfather is involved in farming, and my mother is a homemaker.

We are a small and supportive family. I don't have any siblings, so I've always been close to my parents and grandparents.

Talking about my hobbies-

I enjoy reading technology blogs, watching tech-related videos, playing video games, and sometimes just relaxing with music or movies.

I also like traveling and exploring new places whenever I get the chance.

Now coming to my technical background-

I've worked with JavaScript, Java, HTML, CSS, React, Flutter, Node.js, and ASP.NET Core.

For backend and databases, I'm familiar with SQL and MongoDB, and I use Git for version control.

I've also done some practical projects during my journey.

For example, I worked on StockNova, which is an inventory management system built using ASP.NET Core and SQL.

Another one is Farmer Direct Market, a platform built with Flutter and Node.js to connect farmers directly with buyers.

And a Food Recipes App, which gives users personalized recipe suggestions.

These projects helped me understand how to turn ideas into working applications and improve my problem-solving skills.

Apart from that, I've participated in hackathons like the Angular Hackathon, where I worked on an Employee Management System,

and Anveshana, a national-level competition where I focused on real-world problem-solving with a team.

If I talk about my strengths-

I'm a quick learner, and I always try to stay updated with the latest technologies.

I enjoy learning through practice and always look for ways to improve.

One area I'm still working on is overthinking.

Sometimes I spend too much time planning or checking small details, but I'm learning to trust my process and be more confident.

My short-term goal is to improve my technical and communication skills and gain more real-world experience.

In the long term, I want to become a software developer who can lead a team, guide others, and keep learning throughout my career.

I want to join BOSC because I believe it's a great platform to collaborate with others, work on real projects, and grow both technically and personally.

I'm really excited to learn new things, face challenges, and be part of a motivated team.

Thank you for listening, and I hope to be a part of this journey.
